CURRENT STATE SYSTEMS TOPOLOGY - ACME CORP ONBOARDING

Author: David Chen, Solutions Architect
Folder: All Files / Customers / Acme Corp / Architecture & Tech
Box ID: BOX-FILE-8839216

CURRENT APPLICATION LANDSCAPE:
1. Ingestion Point: Customer portal uploads land on legacy on-premise Windows SMB file shares.
2. CRM: Salesforce Sales Cloud (Enterprise Edition) used for lead management and account records.
3. Pain: No native bridge exists between SMB file storage and Salesforce; ops reps spend 2-3 hours daily manually locating files and retyping metadata.
4. Search: Windows indexer fails across network shares, creating search friction across onboarding cases.
5. SSO: Moving towards centralized federated authentication across all corporate cloud services.
