PROPOSAL RESPONSE: ENTERPRISE AI DOCUMENT INTELLIGENCE & CONTEXTUAL REASONING PLATFORM

Prepared for JPMorgan Chase & Co. Commercial Banking & Asset Management Operations

Client Name	JPMorgan Chase & Co.
RFP Reference	RFP-2024-AI-088 (Commercial Document Intelligence)
Submitting Entity	IBM Corporation - Hybrid Cloud & AI Practice
Proposed Platform	IBM Bob Enterprise Edition (with Box Content Cloud MCP Connector)
Submission Date	June 18, 2024
Security Clearance	Banking Tier-1 Confidential / Non-Public Financial Data

1. Executive Summary

IBM is pleased to present **IBM Bob Enterprise** to JPMorgan Chase & Co. as the enterprise-grade AI document intelligence and agentic workflow platform. Financial institutions manage millions of unstructured documents annually—including loan covenants, syndicated credit agreements, KYC packages, and regulatory filings. IBM Bob directly connects to Chase's existing Box Content Cloud via the **Model Context Protocol (MCP)**, delivering agentic document reasoning, deterministic extraction, and automated proposal/RFP drafting with zero data retention for model training.

> **Key Value Proposition:** Combines deep IBM agentic AI with Box's single content layer, reducing commercial loan review cycles from **48 hours to under 15 minutes** while ensuring 100% adherence to FINRA, OCC, and SEC regulatory standards.

2. Technical Architecture & Box Integration

IBM Bob connects directly to Box repositories using high-throughput, secure MCP connectors. When processing inbound document packages or generating structured responses, Bob executes deterministic multi-step reasoning:

- **Model Context Protocol (MCP) Boundary:** Secure, token-scoped in-memory execution connecting to Box folders, metadata templates, and Box Shield classification tags.
- **Hybrid AI Engine:** Powered by IBM watsonx Granite enterprise models optimized for financial document parsing, tabular data extraction, and cross-reference synthesis.
- **Zero-Hallucination Guardrails:** Every generated answer is anchored to specific Box document IDs, page coordinates, and exact sentence excerpts.
- **Enterprise RBAC Mirroring:** Inherits Box user permissions and Active Directory/PingFederate SAML groups in real time.

3. Security, Encryption & Regulatory Compliance

Control Domain	JPMC Requirement	IBM Bob Specification	Compliance Status
Encryption at Rest	AES-256 with CMEK support	FIPS 140-3 validated AES-256; Customer-Managed Encryption Keys via IBM Key Protect / Box Shield	Compliant
Encryption in Transit	TLS 1.2+ mandatory (TLS 1.3 preferred)	Strict TLS 1.3 enforced on all REST / gRPC / MCP endpoints; mTLS between microservices	Compliant
Data Retention Policy	Zero AI model training on customer data	Zero customer data used for base model training or fine-tuning; ephemeral in-memory tokenization only	Compliant
Audit Logging	365-day immutable audit trail	Detailed SIEM export (Splunk/QRadar) with user attribution, document IDs accessed, and exact prompts	Compliant
Certifications	SOC 2 Type II, ISO 27001, PCI-DSS	SOC 2 Type II (all 5 Trust Criteria), ISO/IEC 27001:2022, ISO 27701 (Privacy)	Compliant

4. Proposed Implementation Methodology

IBM proposes an **8-week Enterprise Fast-Track Delivery Roadmap** comprising four structured 2-week sprints:

1. **Sprint 1-2 (Foundation & IAM):** Provision dedicated VPC, configure Box MCP enterprise OAuth 2.0 app, and bind PingFederate SAML 2.0 SSO.
2. **Sprint 3-4 (Taxonomy & Folder Grounding):** Ingest and index Chase commercial lending templates, regulatory knowledge bases, and credit policy manuals in Box.
3. **Sprint 5-6 (Agent Customization & UAT):** Deploy customized prompt pipelines for loan covenant extraction, automated RFP generation, and KYC cross-checking.
4. **Sprint 7-8 (Production Go-Live & Enablement):** Security sign-off, SOC monitoring integration, and enablement workshops for 250 commercial loan underwriters.
