GLOBAL DATA PRIVACY & REGULATORY COMPLIANCE GUIDE

Enterprise Data Sovereignty, PII Protection & Cross-Border Frameworks

Compliance Frameworks	GDPR (EU 2016/679), CCPA/CPRA (California), HIPAA/HITECH, PIPEDA (Canada)
Data Residency Options	US Sovereign (Dedicated AWS/IBM Cloud Gov), EU Frankfurt/Paris, UK London, APAC Sydney/Tokyo
Data Processor Role	IBM acts strictly as Data Processor; Customer retains 100% Data Controller authority

1. Data Sovereignty & Regional VPC Pinning

Enterprise customers can pin their IBM Bob runtime and Box connector to specific geographic regions. Customer data never crosses regional boundaries. For US banking and federal accounts, all processing occurs within US sovereign data centers managed exclusively by US personnel.

2. PII / Sensitive Data Handling

- **Real-Time PII Masking:** Automated identification and tokenization of SSNs, credit card numbers, Tax IDs, and dates of birth.
- **Data Subject Access Requests (DSAR):** Full programmatic support for GDPR Articles 15-20 (Right to Access, Rectification, and Erasure).
- **Sub-Processor Transparency:** Complete listing of vetted sub-processors with contractual guarantees mirroring primary customer terms.

3. Data Transfer Impact Assessment (DTIA)

IBM provides comprehensive pre-completed DTIAs and EU Standard Contractual Clauses (SCCs) to facilitate customer cross-border regulatory filings with national data protection authorities.
